1 Цель работы

Получение навыков правильной работы с репозиториями git.

2 Теоретические сведения

- Gitflow Workflow опубликована и популяризована Винсентом Дриссенем.
- Gitflow Workflow предполагает выстраивание строгой модели ветвления с учётом выпуска проекта.
- Данная модель отлично подходит для организации рабочего процесса на основе релизов.
- Работа по модели Gitflow включает создание отдельной ветки для исправлений ошибок в рабочей среде.
- Последовательность действий при работе по модели Gitflow:
- Из ветки master создаётся ветка develop.
- Из ветки develop создаётся ветка release.
- Из ветки develop создаются ветки feature.
- Когда работа над веткой feature завершена, она сливается с веткой develop.
- Когда работа над веткой релиза release завершена, она сливается в ветки develop и master.
- Если в master обнаружена проблема, из master создаётся ветка hotfix.

- Когда работа над веткой исправления hotfix завершена, она сливается в ветки develop и master.

3 Выполнение лабораторной работы

3.1 Работа с тестовым репозиторием

Для работы с Node.js добавим каталог с исполняемыми файлами, устанавливаемыми yarn, в переменную PATH.

```
ddovletov@ddovletov:~$  
ddovletov@ddovletov:~$ pnpm setup  
Appended new lines to /home/ddovletov/.bashrc  
  
Next configuration changes were made:  
export PNPM_HOME="/home/ddovletov/.local/share/pnpm"  
case "$PATH:" in  
  *:$PNPM_HOME:*) ;;  
  *) export PATH="$PNPM_HOME:$PATH" ;;  
esac  
  
To start using pnpm, run:  
source /home/ddovletov/.bashrc  
ddovletov@ddovletov:~$ source ~/.bashrc  
ddovletov@ddovletov:~$
```

Программа commitizen используется для помощи в форматировании коммитов. При этом устанавливается скрипт git-cz, который мы и будем использовать для коммитов.

```
ddovletov@ddovletov:~$ pnpm add -g commitizen

Update available! 10.27.0 → 10.29.3.
Changelog: https://pnpm.io/v/10.29.3
To update, run: pnpm self-update

Делаем первый коммит и выкладываем на github.

Необходимо заполнить несколько параметров пакета.

Таким образом, файл package.json приобретает вид:

A screenshot of a code editor window. The title bar at the top shows 'package.json' and the file path '~/.git-extended'. Below the title bar, there are three buttons: 'Open', a dropdown arrow, and a '+' icon. The main area of the editor displays the content of the package.json file, which is a JSON object. The code is as follows:

```
1 {  
2   "name": "git-extended",  
3   "version": "1.0.0",  
4   "description": "Git repo for educational purposes",  
5   "main": "index.js",  
6   "repository": "git@github.com:ddovletov/git-extended.git",  
7   "author": "ddovletov",  
8   "license": "CC-BY-4.0",  
9   "config": {

Создадим ветку для новой функциональности По окончании разработки новой функциональности следующим шагом следует объединить ветку `feature_branch` с `develop`:

```
ddovletov@ddovletov:~/git-extended$ git flow feature start feature_branch
Switched to a new branch 'feature/feature_branch'

Summary of actions:
- A new branch 'feature/feature_branch' was created, based on 'develop'
- You are now on branch 'feature/feature_branch'

Now, start committing on your feature. When done, use:

    git flow feature finish feature_branch

ddovletov@ddovletov:~/git-extended$ touch test2
ddovletov@ddovletov:~/git-extended$ git flow feature finish feature_branch
Switched to branch 'develop'
Your branch is up to date with 'origin/develop'.
Already up to date.
Deleted branch feature/feature_branch (was c6debaa).

Summary of actions:
- The feature branch 'feature/feature_branch' was merged into 'develop'
- Feature branch 'feature/feature_branch' has been locally deleted
- You are now on branch 'develop'

- The release was tagged 'v1.2.3'
- Release tag 'v1.2.3' has been back-merged into 'develop'
- Release branch 'release/1.2.3' has been locally deleted
